

Df2020 Author Ice Cream Test Training Guide

This is a simple first test to help understand whether a person has the skills to codify and narrate know-how in the form of a Df-Map.

Version 1.0

The Challenge

Using Df2020 Author, codify and narrate a Df-Map for a user to select an ice-cream flavour with the option of one sauce topping and an additional option of a sweet.

Each endpoint of a pathway is an Outcome that needs to contain a unique sequential number starting from 1 and a description of the choices selected.

Specification

Choose one type of ice cream (mandatory)

1. Vanilla
2. Chocolate
3. Strawberry

Choose sauce (optional)

1. Mango
2. Raspberry

Choose sweet (optional)

1. Marshmallow
2. Chocolate Flake

Test Considerations

1. Write clear and simple narrative so the user can read once and make a decision
2. Test the Df-Map to ensure the narrative makes sense before publication
3. Publish and send to a colleague to use and provide feedback using the features within Df2020 Viewer, including the audit of their user journeys.
4. Review feedback within Df2020 Author and if necessary make changes and repeat the process.

Connected Thinking

The combination of all the steps of logic need to be connected and each pathway reaches an outcome, helps people improve their analytical skills.
