

CHATBOT AUTHOR, DEMOCRATIZES AI THROUGH INTUITIVE AND ACCESSIBLE PRODUCTS.

UNLEASH THIS NEW POTENTIAL.

Chatbot Author empowers those with procedural knowledge to build, test and store their Chatbots on Azure. Fully integrated with the Bot Framework, the chatbots can then be distributed across multiple channels including; Skype, Facebook, Office 365, Web etc. With all of the dialogue data stored in Azure for any period of time, Chatbot Author then provides the ability to measure and visualise dialogue data for audit, compliance, measurements and patterns. Software developers can further develop solutions by accessing the API Dialogue, which can be combined with Cognitive Services for real-time language translation and, Voice-to-Text and Text-to-Voice conversations.

“It’s a simple concept, yet it’s very powerful in its impact. It is about taking the power of human language and applying it more pervasively to our computing.”

Microsoft CEO, Satya Nadella says when speaking about ‘Conversation-as-a-platform’

“Our mission is to empower every person and every organization on the planet to achieve more”
